

# Software Engineer (Web Applications)

## Job Description

This is an exciting opportunity for a UI or fullstack engineer to develop analytical web applications used by our consultants and our clients, in the UK and internationally, in the emergency services sector. At ORH our software team is passionate about creating sophisticated software that allows users to tackle the complexity of data and processes in emergency services to help our clients work more efficiently and effectively.

You will join a small team of developers who enjoy the freedom to take advantage of new ideas and technologies. Projects will range from greenfield development of new cloud-based data analysis and mapping tools, to enhancing existing software such as our live tool for mapping emergency incident and vehicle locations that is widely used by fire services in the UK.

You will work collaboratively with the software team and play a key role in designing, developing and supporting applications. Tasks will also include requirements gathering, researching new and innovative solutions for our clients and consultants, reviewing code, and providing guidance for junior developers.

## What We Offer

While our work is important, the atmosphere is relaxed, open and friendly, with everyone pulling together and working towards the same goals. We are a collaborative, friendly team in an excellent working environment.

We offer a starting salary of £41,000 to £55,000, a generous pension, plus a bonus programme. Other benefits include substantial annual leave and leave purchase scheme, life insurance, health cash plan, and opportunities for flexibility in working hours and location.

The role is based at our offices in Reading. We provide training, support and career development opportunities. We value innovation and encourage employees to follow their own interests in learning and exploring new technologies and techniques.

## About You

You should have proven experience with developing and maintaining web applications and a degree in computer science or another numerate subject. Proficiency in TypeScript and UI frameworks such as Vue, Angular or React are essential for the role. Familiarity with ASP .Net or with the AWS cloud platform would be an advantage.

## About Us

ORH helps emergency services around the world to optimise resource use and respond in the most effective and efficient way. We are a small company with an emphasis on developing the skills of our employees through exposure to interesting projects that have a real-life impact. We pride ourselves on our approachability and strongly value the different skillsets of our staff.

We have recently been re-certified as one of the UK's Best Small Workplaces, which reflects the culture and employee experience we've created. We hold regular social and team building events, celebrate birthdays and each other's differing interests, for example, playing sports together or holding quiz and board game evenings. We strive to be a fair and inclusive employer in all respects, and would love to receive applications from a diverse pool of candidates.

## How to Apply

Please email your CV, with a covering letter outlining how you fit this role, to: [jobs@orhltd.com](mailto:jobs@orhltd.com)

Candidates will usually be contacted within one week of the closing date. Please read our privacy notice here: [Candidate Privacy Notice](#)
